

**Workshop Chairs:**

Roger Baig, Guifi.net,  
Spain  
Bart Braem, iMinds,  
Belgium  
Felix Freitag, Universitat  
Politècnica de  
Catalunya, Spain

**Program committee**

Christoph Barz, FKIE,  
Germany  
Harald Bongartz, FKIE,  
Germany  
Llorenç Cerdà-Alabern,  
Universitat Politècnica  
de Catalunya, Spain  
Jesus Luna, Cloud  
Security Alliance, UK  
Leandro Navarro,  
Universitat Politècnica  
de Catalunya, Spain  
Dirk Neumann, Albert-  
Ludwigs-University  
Freiburg, Germany  
Ermanno Pietrosemoli,  
International Centre for  
Theoretical Physics  
(ICTP), Italy  
Tuan Anh Trinh,  
Budapest University of  
Technology and  
Economics, Hungary  
Vladimir Vlassov, KTH,  
Sweden  
Marco Zennaro,  
International Centre for  
Theoretical Physics  
(ICTP), Italy

**Important dates:**

Paper submission deadline:  
June 1, 2014

Notification of acceptance:  
July 10, 2014

Camera ready paper due:  
August 13, 2014

Advanced registration by:  
September 1, 2014

## CALL FOR PAPERS

### The 3rd International Workshop on Community Networks and Bottom-up-Broadband (CNBuB 2014)

CNBuB 2014 will take place in Larnaca, Cyprus, at October 8, 2014, and is co-located with the 10th IEEE International Conference on Wireless and Mobile Computing, Networking and Communications (WiMob 2014).

**Aim and Scope:** Community networking, together with the Bottom-up-Broadband initiative, is an emerging model for the Future Internet across Europe and beyond where communities of citizens build, operate and own open IP-based networks, a key infrastructure for individual and collective digital participation. Community networks differ from other networks in several key aspects: There is usually no central authority that is responsible for a precise network planning. Support is decentralized and open, provided by the community. The network nodes are often inexpensive off-the-shelf equipment and the network elements exhibit a high degree of heterogeneity in the hardware, software, and capacity. The network infrastructure belongs to the user and is shared to build the network. The network is very dynamic: the number of nodes may rapidly grow and change as new members join the network, or when nodes overload or fail. In these scenarios, the networking and systems research community has the opportunity to contribute with more sustainable, adaptive, scalable, integrated, autonomic solutions for those common traits in community networks. The CNBuB 2014 workshop aims at serving as a meeting point for exchanging ideas, discussing solutions, and sharing experiences among researchers and practitioners, both from academia and community networks.

**Participation:** For participation in the workshop as an author presenting a paper please refer to the submission instructions. Community network participants authoring a paper can apply for a financial support (limited number of grants) for being able to present their work at the workshop. Please contact with the workshop chairs.

**Papers:** The workshop solicits original papers addressing theoretical and practical challenges of community networks and bottom-up-broadband, including insights from other disciplines that contribute to the socio-technical-economic understanding of the community network operation and growth. Topics of interest for CNBuB 2014 include, but are not limited to:

- Wireless mesh networks
- Wireless MAC and routing protocols
- Services and applications
- Clouds for community networks
- Cross-layer designs
- Hybrid networks with wireless and optical fibre links
- Tools for bootstrapping and running community networks
- Performance modelling and evaluation
- Quality of service provisioning
- Quality of experience in community networks
- Community network security and privacy
- Large-scale management and data collection infrastructures
- Incentive models to encourage participating in community networks
- Socio-technical-economic models for community networks

**Submission instructions:** Papers should be submitted in PDF as intended for the final publication, fully formatted following IEEE Computer Society Proceedings Author Guidelines. The length of the papers must not exceed 6 IEEE pages. All papers will be peer reviewed and the comments will be provided to the authors. Once accepted, the paper will be included into the IEEE conference proceedings published by IEEE Computer Society Press and will be accessible via IEEE Xplore Digital Library. At least one of the authors of each accepted paper is required to register at the regular rate to the conference. See the CNBuB2014 website for detailed instructions.
